A drink pack position-keeping device of the present invention keeps a drink pack in a drink container at the reasonable location and the drink pack can easily be taken out from the drink container any time. The drink pack position-keeping device of the present invention comprises a stopper, a suspending unit and an attaching unit. The drink pack containing an object to be infiltrated is attached to the suspending unit with the attaching unit. When the drink pack position-keeping device is attached to the drink container, the stopper is placed on the entire rim of the upper end of the mouth of the drink container, and the drink pack suspending from the stopper is located at the predetermined length lower than the liquid level in the drink container. Accordingly, the drink pack is prevented from going to the bottom of the drink container.
